... solar, safety and energy saving solutions

Whether you are a small business or billion-rand corporation, you do what it takes to reduce expenses and protect your bottom line. With Sun Stop Window Tint solar window film installed on your office you can save significantly on energy costs, maintain a more and productive environment, reduce interior fading and improve exterior appearance. Our window films start working for you the minute they installed to your glass offering you benefits beyond your needs year after year.

... architects and building engineers go **green**

Designing energy efficiency buildings and structures is the fastest growing trend in the construction industry.

Sun Stop Window Tint a wide range of window films to solve common building envelope issues, including hot spots, interior fading, and safety.

... **going green**

Sun Stop Window Tint have a net positive enviromental impact. Buildings are such a large source of carbon emissions, many building managers and home owners are concerned with reducing their carbon footprint. Our Commercial Window Films send the sun's heat away from your building, giving you and your company extensive savings on your air-conditioning cost.

... the facts :

Solar Protection

... sun stop window tint blocks harmful rays while letting visible light through.

Practically invisible when installed onto glass, Stop Window Tint rejects high levels of heat - offering you strong protection against bothersome glare, uncomfortable hot spots and uneven temperature fluctuations. You'll feel an immediate difference upon installation.

Fading

... sun stop window tint blocks harmful rays

The sun's ultra violet radiation, heat and light cause fading and deterioration of fabrics, carpets furnishings, storefront displays and other interior items. All Sun Stop Window Tint films reject up to 99 % of harmful ultraviolet radiation and varying amounts of heat and light. This dramatically reduce damage to your interiors and furnishings keeping them in like-new condition longer.

What causes fading?

... the facts :

Safety

... sun stop window tint keep shattered glass intact and protect occupants

Anything from a stray golf ball to a violent storm can send shards of glass flying, subjecting people and property to serious damage, injury or worse. Sun Stop Window Tint keep dangerous shards together on impact, whether due to accidents, severe weather, attempted break ins, or vandalism.

Energy Savings

... sun stop window tint solar films produce positive impact on the environment

Sun Stop Window Tint solar protection films save up 30% on energy costs, which can reduce many buildings' carbon footprints. It can be installed quickly and professionally , allowing you begin realizing your energy saving goals without delay. Savings can be applied to offset initial costs, accelerating your return on investment. Long term savings and comfort go on for years.

Residential Window Tint

...visible light without the harmful effects

Visible light, ultraviolet light, and infrared light the sun poses serious health risks, increases room temperatures, damages furniture, and leads to additional expenditures on cooling, furniture replacement and restoration.

Sun Stop Window Tint residential solar films decrease room temperatures, protect your health, preserve your furniture, and save you money!

... health & skin risk

Ultraviolet rays damage the skin and the eyes, and lead to skin cancer. Sun Stop Window Tint blocks nearly 100% of ultraviolet rays, protecting you from skin cancer and the other harmful health effects of these rays.

... reflect light and reduce indoor heat

By reflecting light instead of absorbing it and transmitting it into your home, Sun stop Window Tint will reduce room temperatures and keep your home cool on hot summer days. In fact, studies suggest that tinted glass can reduce indoor heat by up to 78% more than untreated glass.

Residential Window Tint

... protect from sun damage and fading

The reflective qualities of window film also prevent fading and sun damage to furniture and your home's interior. By reducing the amount of harmful light rays entering your home Sun Stop Window Tint preserves original colors and keeps fixtures and furniture looking new.

... make your home comfortable

Everyone loves natural light, but glare from the sun is often a nuisance that makes reading, viewing television, and using computers almost impossible. Traditional blinds prevent usable light from coming in completely and gather dust and pet hair, thus depriving homeowners of the benefits of natural light, diminishing quality, and leading to asthma. By reducing glare and at the same time allowing usable light to enter the home, Sun Stop Window Tint creates for a more pleasant visual atmosphere and allows you to make the most of natural light and take advantage of the bright rooms in your home. In addition, window film doesn't collect dust.

... reduces energy consumption

Sun Stop Window Tint significantly reduces energy consumption and has been recognized by the government an effective tool for combating global warming and reducing carbon emissions. By equipping your home with window film not only will you help to preserve our planet, but you will save money too!

Automotive Window Tint

... enhances appearance and privacy

Tinted windows can contribute to enhancing your vehicle's overall appearance, giving it sleek and classy look. There is a variety of window film products to suit any type of car, truck, or SUV. From light to darker film colours, there's a range of shades to give your vehicle the look you want.. Our durable scratch resistant are fully guaranteed against cracking, blistering, bubbling, or delaminating from the glass when installed.

... skin protection

"One in five South Africans will develop Skin Cancer"

... our solar control film can help you beat the odds

The average South African worker spends the equivalent of an entire week in their car commuting to work each year. Most people don't realize that the glass in their motor vehicle protects them from UVB rays only, those that cause sunburn. Cumulative exposure to UVA is directly linked to skin cancer and premature aging. Sun Stop Window Tint solar film protects from both UVA and UVB ultraviolet rays, making it an ideal solution for protecting your skin. Solar film blocks more 99% of the sun's damaging UVA and UVB rays. Sun Stop Window Tint solar film is ideal if you want to protect your skin from the daily onslaught of sunlight. The ultraviolet radiation in sunlight has many negative effects on skin including:

- Causes 90% of all premature skin aging and wrinkles
- Destroys vitamin A in the skin, which contributes to cell damage
- Damages collagen, the structural protein that keeps skin cells firm, causing wrinkles and sagging
- UV is increasingly being linked to skin cancer

Type of UV radiation	Effects
UVA	Skin aging, eye damage, linked to skin cancer
UVB	Sunburn, premature skin aging, eye damage, linked to skin cancer
UVC	Most destructive but mostly stopped by the ozone layer

Automotive Window Tint

... security

Tinting has always been associated with increased security for your vehicle, what a thief does not or cannot see usually will be left alone! All Sun Stop Window Tint solar films render the glass shatter resistant, holding shattered glass in place in the event of an accident or an attempted smash and grab. This can prevent dangerous shards of glass from flying into the vehicle and seriously injuring its occupants

... enhance fuel economy

Tinted motor vehicles promote temperature control and glare prevention which reflect sunlight and keep the interior of the car cooler. This allows the occupants to minimize the use of air conditioning and decrease fuel consumption.

Decorative Tint

... stylish and cost effective

Sun Stop Window Tint Decorative Films have taken the market by storm. Interior designers, contractors and residential & commercial window installers are enthusiastically embracing these designs!

Decorative window film is ideally suited for applications that require day or night privacy without sacrificing the natural light levels in both commercial and residential applications. Commercial films are found in banks, restaurants, health clubs, hotel foyers, conference rooms, and are used as office partitioning. Commercial building are dramatically increasing the use of internal glass walls as partitioning which brings natural light into offices, creating greater work productivity, as well as the illusion of a more spacious room with privacy.

Films are installed using a water and soap based solution. Decorative window films are easily removed and replaced to the appearance at a later time. This, of course, is a great advantage as most landlords do not object to their tenants' installation of film when they find out the product can be removed.

Decorative Tint

privacy

decorative

Flexible Design - Sun Stop Window Tint allows the customer to bring colour, visual effects and graphic patterns to glass surfaces in commercial and residential spaces or customize a space with a corporate logo or signage.

Cost Effective - Etched glass is an expensive option when compared with these aesthetically pleasing and versatile film treatments.

Enhanced Privacy - Decorative films allow light to pass through glass while protecting privacy in homes, offices, and commercial environments.

Glare Reduction - Decorative films reduce eye strain and help improve conditions for office employees and building tenants.

Add Decorative Films to:

- Glass partitions to add privacy
- Retail displays
- Walkways
- Office doors * conference rooms * private spaces
- Bathrooms without blocking the light.
- Make glass surfaces clearly and beautifully visible
- To delineate passageways enhance safety in public spaces
- Add flexibility to displays
